The screenshots in this manual were taken from the real UntungLab with a sample Standard Brownies menu item. The red numbers on a picture match the numbers in the caption below it. Your own figures will differ, because they are worked out from your own prices and costs.

Getting to know UntungLab

What UntungLab does, and how it works out the real profit of each of your menu items.

UntungLab is an app for home food businesses. You enter the price of ingredients and packaging, your time (or your workers' pay) and business costs such as rent and electricity. UntungLab works out the **real cost** of every menu item, shows the **real profit** and **margin**, and suggests a selling price for the margin you want.

Many sellers work out profit by taking only the ingredient cost off the selling price. Rent, electricity, gas, packaging and their own time get missed, so profit looks big when it is really small. UntungLab counts everything.

How the real cost is worked out

Part	What it means
Ingredients	The cost of the ingredients used in one unit sold, worked out from the pack prices you entered.
Packaging	Boxes, bags, stickers and so on for one unit.
Work time	The time to prepare one unit. If you work alone it is valued at your Time Value (RM per hour). If you have workers it is valued at the team's average hourly rate, worked out from their pay.
Production utilities	Electricity used by equipment such as the oven, from its watts and time in use.
Shared operating costs	Rent, general electricity, water, internet, gas and other business costs, spread fairly across every menu item.

Margin is Estimated Profit divided by Selling Price, as a percentage. Example: RM1.25 profit on a RM6.00 selling price is a 20.9% margin.

Margin status

Every menu item gets one status so you can see straight away which ones need fixing.

▼ This Menu Is Losing Money

Profit is below RM0. The real cost is higher than the selling price.

▼ Low Margin	Margin below 25%.
! Needs Attention	Margin from 25% up to below 40%.
✓ Healthy Margin	Margin of 40% or more.

REMEMBER

The 25% and 40% levels are UntungLab guidelines, not an industry standard. You decide the final price. Your type of business and fixed costs may call for a higher or lower margin.

Your data and the internet

- All your data (ingredients, menus, costs, price history) is stored **on your device**. No account, no login, and nothing is sent anywhere.
- UntungLab works **without internet** once installed. Internet is only needed once, to activate the licence code.
- Because your data exists only on your device, **save a Backup** regularly (see the Backup chapter).
- The app is available in **Bahasa Melayu** and **English**. Change it in Settings (see the Settings, language and manual chapter).

Free version and Full version

	Free version	UntungLab Full
Menus	2	No limit
Ingredients	10	No limit
Packaging	2	No limit
Other costs (in Operating Costs)	3	No limit
Menu variations	Not included	Yes
Import ingredients from Excel	Not included	Yes
Everything else	The same in both	
Payment	Free	One payment, use it for good, 2 devices

2

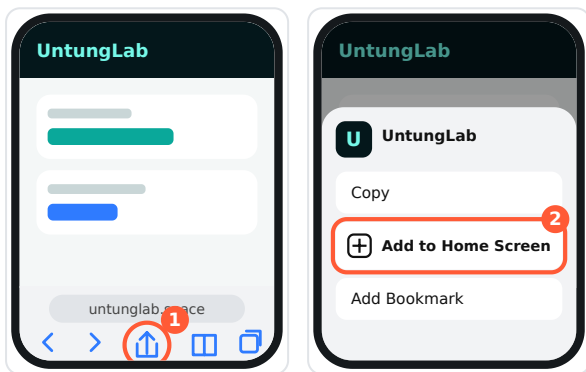

Install and get started

Add UntungLab to your home screen, activate your licence code and follow the Start here list.

1. Add it to your home screen

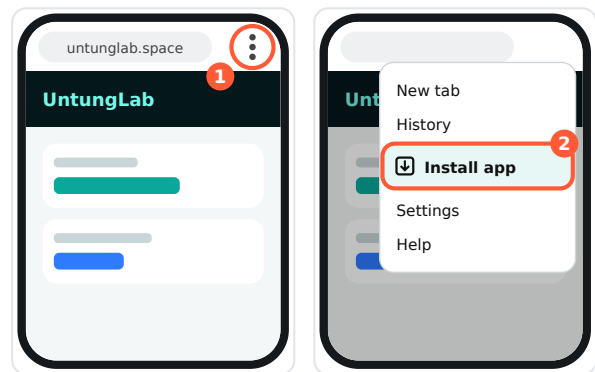

UntungLab is a web app, so there is no Play Store or App Store. You add it to your home screen once and it behaves like a normal app. **Install and open it once while you have internet** so it works offline afterwards.

iPhone / iPad (Safari)

- 1 Open UntungLab in **Safari**.
- 2 Tap the **Share** button (a box with an arrow pointing up) at the bottom of the screen.
- 3 Scroll and tap **Add to Home Screen**.
- 4 Tap **Add**. The UntungLab icon appears on your screen.

Android (Chrome)

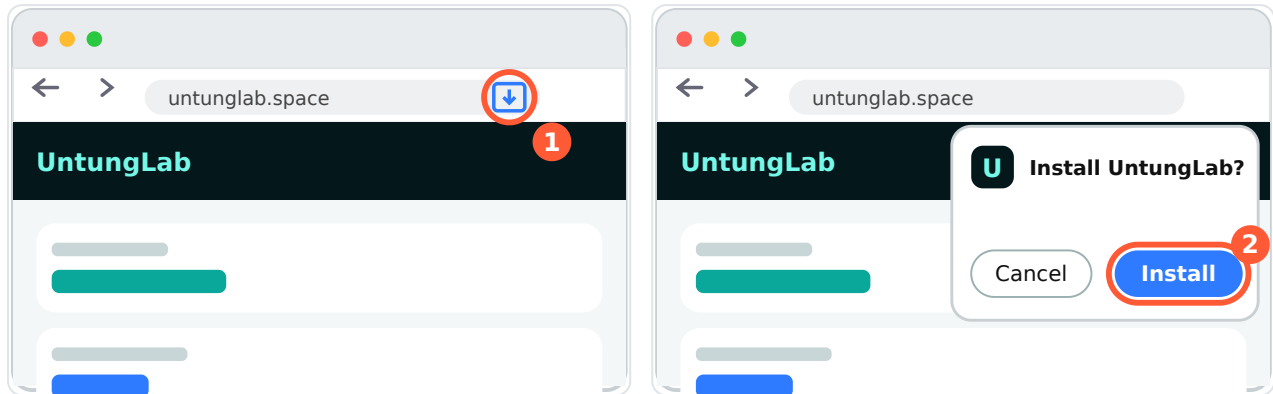

- 1 Open UntungLab in **Chrome**.
- 2 Tap the **⋮** menu (three dots) at the top corner.
- 3 Choose **Install app** or **Add to Home screen**.
- 4 Tap **Install**. The UntungLab icon appears on your screen.

AN "UNSAFE APP" WARNING?

This is a normal Android or Google Play Protect warning for apps installed from the web. UntungLab does not collect your data. Tap **More details**, then **Install anyway**. If you are unsure, just use UntungLab in Chrome without installing it.

Computer (Chrome or Edge)

- 1 Open UntungLab in Chrome or Edge.
- 2 Look for the **Install** icon at the end of the address bar (top right), or open the **⋮** menu and choose **Install UntungLab**.
- 3 Click **Install**. UntungLab opens in its own window.

REMEMBER

Install it on the phone you use for your business. Data is stored on that device only. Another phone with UntungLab installed starts empty, unless you restore a Backup.

2. Activate your licence code

After paying, you receive a licence code that looks like **UL-XXXX-XXXX-XXXX** on the payment screen and by email. If the email is not in your Inbox, check **Spam**, **Promotions** or **Important**.

- 1 Tap **Open UntungLab & activate** on the payment screen. The code fills in by itself. Or open **Licence** in the app and type or paste the code.
- 2 Tap **Activate**. You need internet for this step only.
- 3 The Licence screen changes to **UntungLab Full** and all limits are lifted.

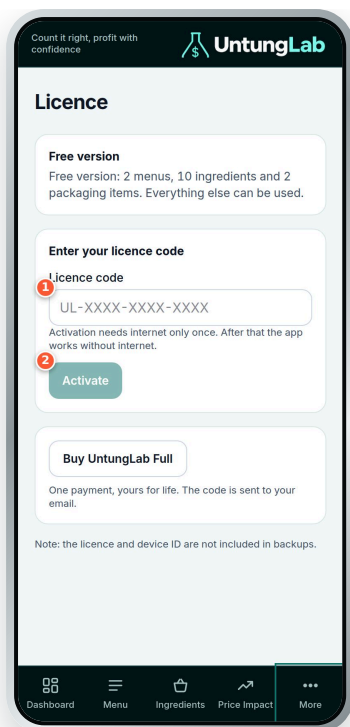

Figure 1. The Licence screen (Free version).

- 1 Licence code field.
- 2 The Activate button.

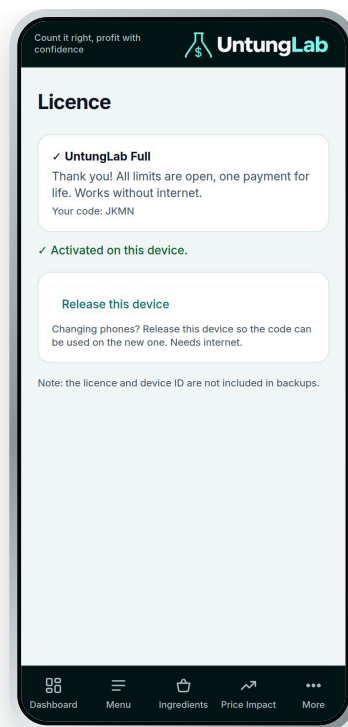

Figure 2. After activating: UntungLab Full.

3. Follow the Start here list

While you have no menu yet, the Dashboard shows a list of seven steps. Finish steps 1 to 4 first, then create your first menu. The order makes sure your operating costs are in place before a menu is calculated.

1	Say whether you work alone or have workers , and set your time cost (Operating Costs)
2	Fill in all 6 Operating Cost categories . RM0 if you have no such cost
3	Fill in Estimated Monthly Sales
4	Add your first ingredient
5	Add packaging (<i>optional</i>)
6	Add equipment (<i>optional</i>)
7	Create your first menu

4. Moving around the app

On a phone, the bottom bar has four main choices: Dashboard, Menu, Ingredients and Price Impact. Everything else (Packaging, My Equipment, Price Tracker, Operating Costs, Report, Backup, Licence, Settings, Manual) is under **More**. On a large screen, all choices are in the side menu.

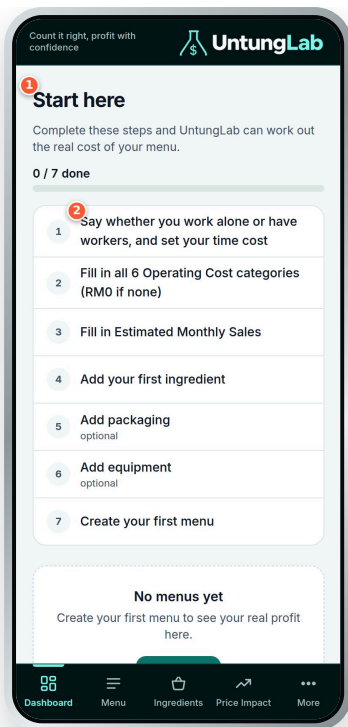

Figure 3. The Dashboard before you have a menu: the Start here list.

- 1** The list of steps and your progress.
- 2** The first step.

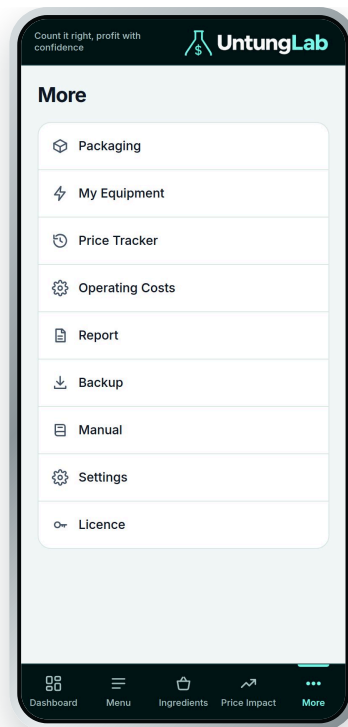

Figure 4. The More menu on a phone.

Operating Costs

The business costs every menu item shares: rent, electricity, water, internet, gas and other costs, plus who does the work.

Fill this in **once**. UntungLab spreads these costs across every menu item according to sales, so you do not repeat them in each menu. All **6 rows are required**. If you have no such cost, tap **No such cost (RM0)** so UntungLab knows it was not forgotten. For most rows you only need the **monthly bill** and the **percentage used for the business**.

Who does the work?

The time cost in every menu depends on who prepares it. Choose one:

- **Working alone:** fill in your **Time Value (RM per hour)**, which is what one hour of your work is worth. Example: RM15 an hour, so 30 minutes of preparation counts as RM7.50.
- **I have workers:** add each worker with **monthly pay**, **days per month** (chips 26 or 22) and **hours per day** (usually 8). UntungLab works out the **team hourly rate** = total pay ÷ total working hours, and uses it in place of Time Value. You can list yourself as a worker.

Figure 5. Choosing between working alone and having workers.

- 1 The Who does the work? card.
- 2 Choose Working alone or I have workers.

Figure 6. Adding a worker.

- 1 Worker name.
- 2 Monthly pay.
- 3 Days-per-month chips: 26 (6-day week) or 22 (5-day week).
- 4 Hours per day.

Figure 7. The workers list and the team hourly rate.

- 1 I have workers is selected.
- 2 Each worker with their hourly rate.
- 3 The team hourly rate used in every menu.

REMEMBER

Workers' pay is **already part of the time cost** of every menu item, so do not enter it again in Operating Costs. Worker cost comes from pay only; employer contributions such as EPF and SOCSO are not added automatically. Switching between Working alone and I have workers does not delete any data.

Business settings and summary

- **Business name and type** (optional).
- **Estimated Monthly Sales (RM)**: the sales you expect in a month. It is used to spread operating costs. Without this number the operating cost rate cannot be worked out.

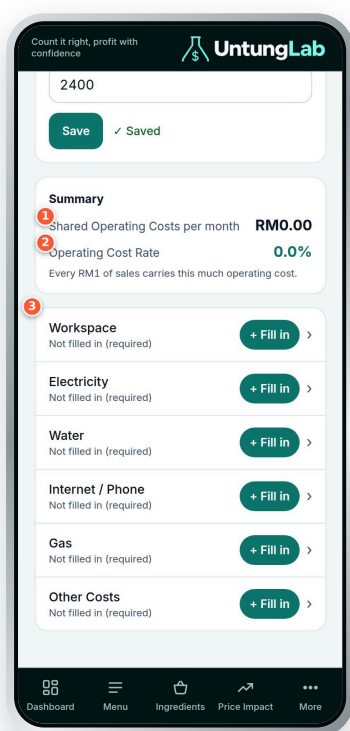

Figure 8. The summary and the six categories.

- 1 Total shared operating costs per month.
- 2 The Operating Cost Rate.
- 3 Tap a row to fill it in or edit it.

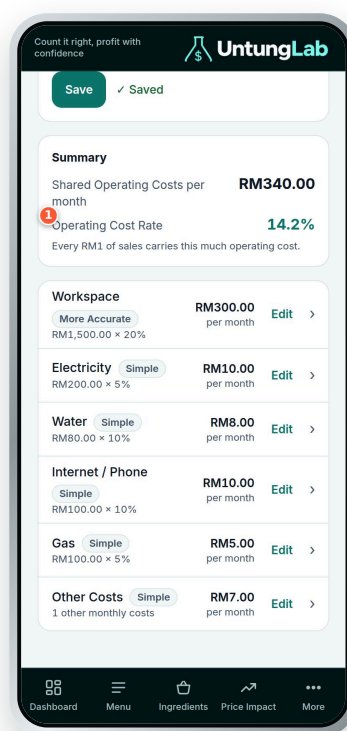

Figure 9. All categories filled in.

- 1 RM340.00 per month in total and a 14.2% rate.

The **Operating Cost Rate** is the total monthly cost divided by Estimated Monthly Sales. In the example above, RM340.00 divided by RM2,400 is 14.2%. That means every RM1 of sales carries RM0.142 of operating cost.

Electricity, Water, Internet / Phone and Gas: bill × percentage

These four rows work the same way. Choose **Calculate from bill**:

- 1 Enter the **Monthly bill (RM)**, for example an electricity bill of RM200.
- 2 Pick the **% used for the business** with the chips **3%, 5%, 10%, 15%, 20%**, or tap **Other** and type your own. A rough estimate is enough.
- 3 Check the **Calculated result**. Example: $\text{RM}200 \times 5\% = \text{RM}10.00$ per month. Tap **Save**.

If you already know the exact monthly amount, choose **Direct amount** and type the RM per month. A direct amount you entered earlier is still counted as usual.

Figure 10. Electricity: monthly bill $\times$ business percentage.

- 1 Monthly bill.
- 2 Business percentage chips.
- 3 The calculated result.

Figure 11. The electricity rate with guide chips.

- 1 Electricity rate (RM per kilowatt hour).
- 2 Guide chips RM0.25, RM0.35 and RM0.45.
- 3 Save rate.

WARNING

The Electricity percentage is for general electricity only (lights, fridge, air conditioning). Electricity used by the oven, mixer or other production equipment is counted in each menu from My Equipment. If you include it here too, it is counted twice.

The electricity rate for equipment

For equipment electricity to be counted in each menu, fill in Electricity with **Calculate from bill** and save the **Electricity rate (RM per kilowatt hour)**. The RM0.25, RM0.35 and RM0.45 chips are rough guides only; check your TNB bill for the exact figure. If Electricity is entered as a **Direct amount**, the full bill is already in Operating Costs, so equipment is not counted again and nothing is counted twice.

Workspace

Workspace has two ways: **Simple** (type the RM per month) or **More Accurate calculation**: home cost or rent $\times$ the percentage of space used (**Enter a percentage**), or from the house area and business area (**Calculate by area**). Going back to Simple does not delete your More Accurate details.

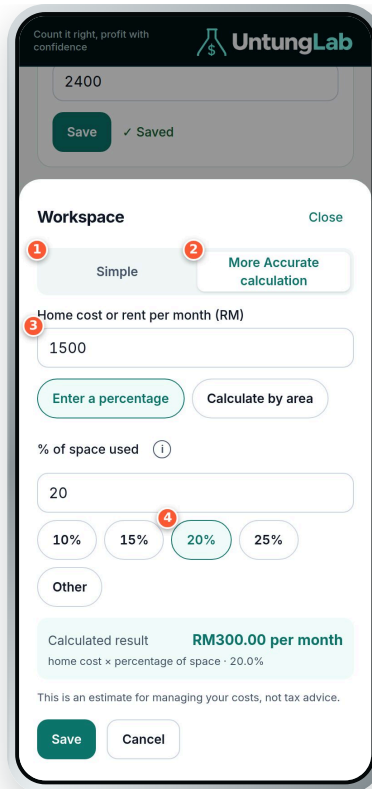

Figure 12. Workspace in More Accurate calculation mode.

- 1 Choose Simple or More Accurate calculation.
- 2 More Accurate calculation is selected.
- 3 Home cost or rent per month.
- 4 Percentage of space used.

Other Costs: a list

Other Costs is a list. Add each monthly cost one by one: tap a suggestion (Delivery, Phone and internet, Transport, Ads, Platform fees) or type your own name, enter the amount per month, and tap **Add other cost**. The total of all items is your Other Costs figure. The Free version can store 3 items.

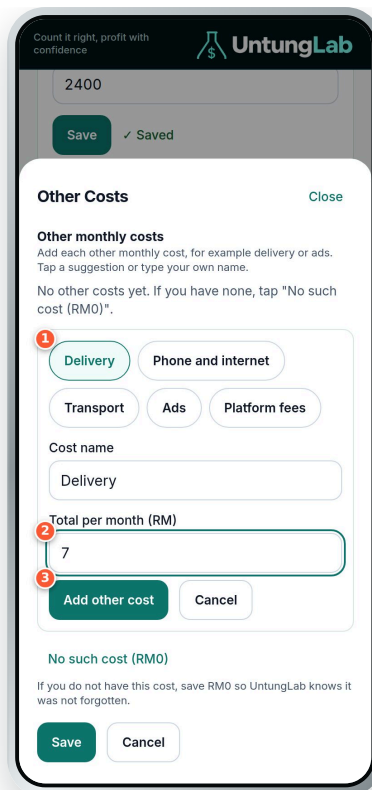

Figure 13. Adding one other cost.

- 1 Suggested cost names.
- 2 Amount per month.
- 3 Add other cost.

TIP

No other costs? Tap **No such cost (RM0)**. In the Operating Costs list, a row that is filled in shows its amount, its mode (for example Simple or More Accurate) and an **Edit** button.

4

Ingredients

Enter the purchase price and pack size. UntungLab works out the unit cost and tracks every price change.

- 1 Open **Ingredients** and tap **Add ingredient**.
- 2 Fill in **Name**, **Purchase price (RM)**, **Quantity in pack** and **Pack unit** (for example kg, g, l, ml, pcs, pack, box).
- 3 Check the **Unit cost** that is worked out for you, then tap **Save**.

Example: 250 g of butter at RM12 becomes **RM48.00 per kilogram**. This unit cost is what your menu recipes use.

Figure 14. Adding an ingredient.

- 1 Ingredient name.
- 2 Purchase price of one pack.
- 3 Quantity in the pack.
- 4 Pack unit.
- 5 Unit cost worked out for you.

Ingredient	Purchase price	Quantity	Unit cost
Butter	RM12.00 / 250 g		RM48.00 / kg
Cooking chocolate	RM20.00 / 500 g		RM40.00 / kg
Eggs	RM15.00 / 30 pcs		RM0.50 / pcs
Flour	RM4.00 / 1000 g		RM4.00 / kg
Sugar	RM3.00 / 1000 g		RM3.00 / kg
Walnut	RM30.00 / 250 g		RM120.00 / kg

Figure 15. The ingredients list.

- 1 Add ingredient.
- 2 One ingredient: name, pack price and unit cost. Tap to edit.

Import from Excel (Full version)

Have many ingredients? Add them in one go with an Excel or Google Sheets file. It works without internet.

- 1 Tap **Import Excel**, then **Download template**. The template already lists 14 common ingredients (name and unit only).
- 2 Open it in Excel or Google Sheets. Fill in the **purchase price** and **quantity in pack**, and add your own rows. The unit column has a drop-down list. Save as .xlsx or .csv.

- 3 Tap **Choose file**. UntungLab shows a **preview**: new ingredients, price updates, no change, blank rows skipped, and **problem rows** with the row number and the reason. Nothing is saved yet.
- 4 Tap **Import** to save the rows that are fine.

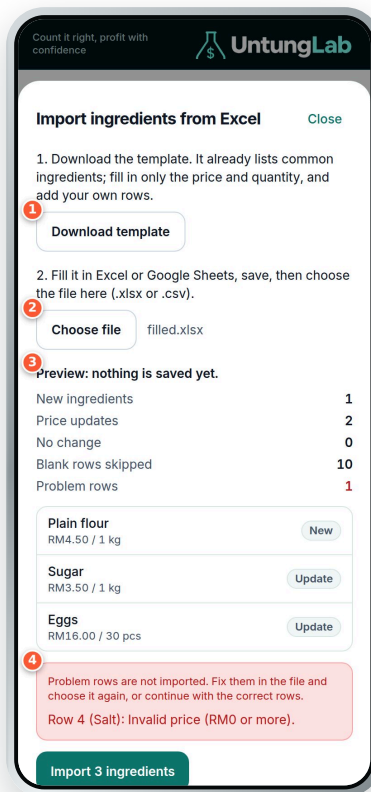

Figure 16. Importing ingredients: template, file and preview.

- 1 Download the template.
- 2 Choose the filled-in file.
- 3 Preview: nothing is saved yet.
- 4 Problem rows are not imported; the good rows still can be.

REMEMBER

An ingredient with the **same name** (upper or lower case does not matter) has its **price updated** instead of being added twice, and the change is recorded in the Price Tracker. A row with only a name and no price or quantity is skipped. The Free version adds ingredients one by one.

Pack mapping (optional)

Use it when you buy in one unit but use another. Example: eggs are bought by the pack but the recipe uses pieces. Open **Pack mapping** and say how many. Example: 1 pack = 12 pieces.

Count it right, profit with confidence

Figure 17. Pack mapping, purchase date and supplier.

When a price goes up or down

When an ingredient's price changes, edit it and change the price or pack size. The change is recorded in the **Price Tracker**, and every menu uses the new price straight away. Want to try it first without changing anything? Use **Price Impact**.

Archive

An ingredient you no longer use can be archived (the **Archive** button on the edit screen). It disappears from the list but old menus are not broken. Tap **Show archived** to see it and **Restore** when needed.

REMEMBER

Free version: up to 10 ingredients. Existing data can still be edited once the limit is reached.

5

Packaging

Boxes, bags, cups, stickers and anything else that goes out with each sale.

- 1 Open **Packaging** (under **More** on a phone) and tap **Add packaging**.
- 2 Fill in **Name**, **Purchase price (RM)** and **Number in one purchase**, for example 50 pieces.
- 3 Check the **Unit cost**, then **Save**.

Example: cake boxes at RM30 for 50 pieces come to **RM0.60 each**.

In a menu you choose whether the packaging quantity is **each unit sold** (for example 1 box per brownie) or **each batch** (for example 1 large bag for the whole batch).

REMEMBER

Free version: up to 2 packaging items.

6

My Equipment

Oven, mixer and other equipment. Watts are used to work out the electricity cost of each batch.

- 1 Open **My Equipment** and tap **Add equipment**.
- 2 Search the list (for example Oven, Air fryer, Blender), or choose **My own equipment** and type its name.
- 3 Check the **Watts (W)**. The suggested value is an estimate, so check the label on your equipment and change it if it differs.
- 4 Tap **Save**.

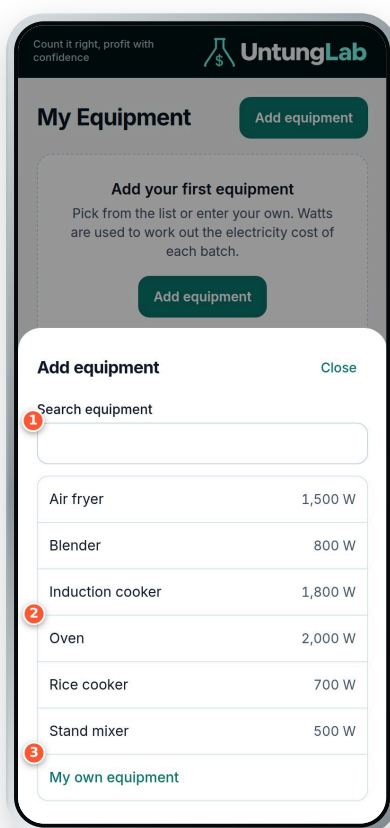

Figure 20. Choosing equipment.

- 1 Search for equipment.
- 2 Pick from the list.
- 3 Or add your own equipment.

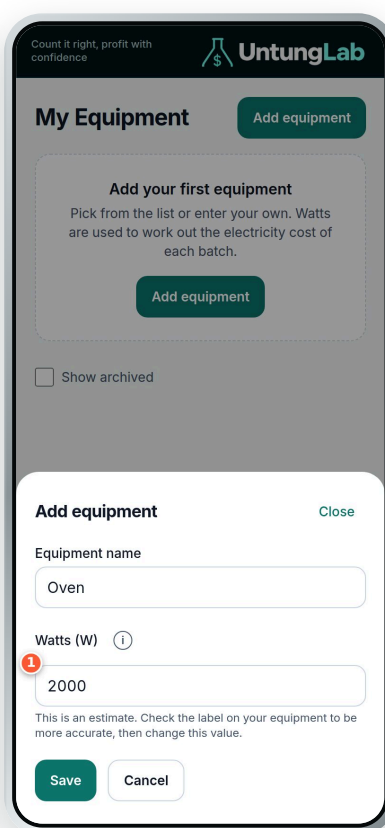

Figure 21. Name and watts.

- 1 Equipment name.
- 2 Watts (W). Found on the equipment label.

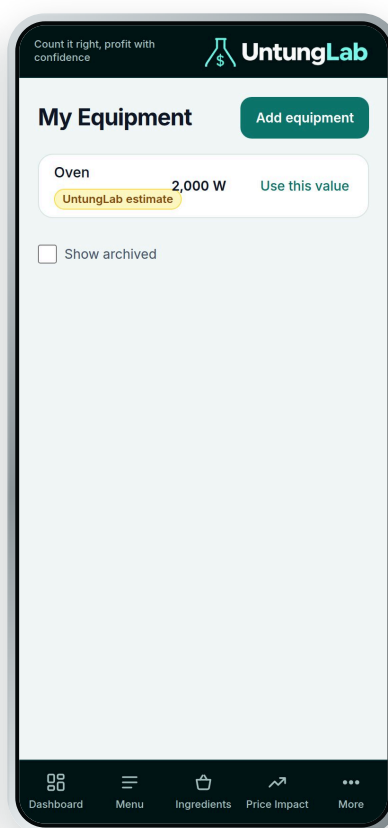

Figure 22. Equipment with an estimate badge. Tap **Use this value** to confirm the watts.

Electricity cost is worked out in **each menu**: $\text{watts} \div 1000 \times \text{hours used} \times \text{electricity rate}$. For this to work, the electricity rate must be saved in **Operating Costs** (Electricity, Calculate from bill). If Electricity is entered as a Direct amount, equipment is not counted in menus.

Menu

Create menu items, see the real cost, profit and margin, group them in categories, make variations, and get a price suggestion.

Create a menu item

- 1 Open **Menu** and tap **Add menu**.
- 2 Fill in the basics (see below).
- 3 Add the **ingredients**, **packaging** and **equipment** used.
- 4 Watch the **Live summary** at the top change as you fill in, then tap **Save menu**.

Field	What to enter
Menu name	Example: Standard Brownies.
Category (optional)	Example: Cakes, Kuih, Rice. Menus in the same category are grouped in the list.
Yield per batch	How many units are ready to sell from one cook. Example: 1 batch = 20 pieces.
Preparation time per batch (minutes)	The total working time for one batch.
Selling Price per unit (RM)	The price you sell one unit for. Costs are only worked out when the price is above RM0.

Count it right, profit with confidence

Dashboard Menu Ingredients Price Impact More

Figure 24. Ingredients in a menu item.

- 1 Choose an ingredient.
- 2 Quantity used and unit.
- 3 Add another ingredient.

Packaging and equipment

Add packaging, choose the quantity, and decide whether it is **each unit sold** or **each batch**. Add equipment and the time used in minutes, for example the oven for 45 minutes. The Equipment section only appears when Electricity in Operating Costs is filled in with Calculate from bill.

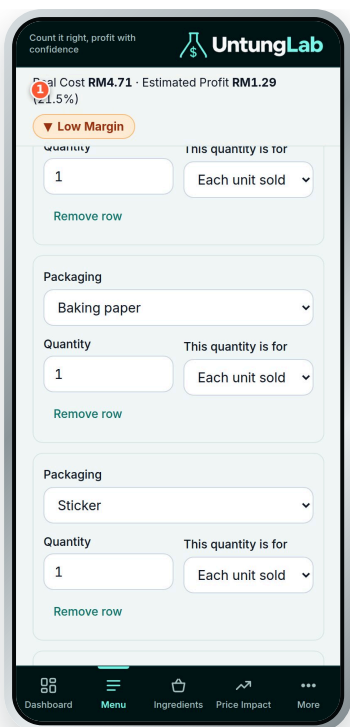

Figure 25. Packaging in a menu item.

- 1 Choose packaging.
- 2 Add more packaging.

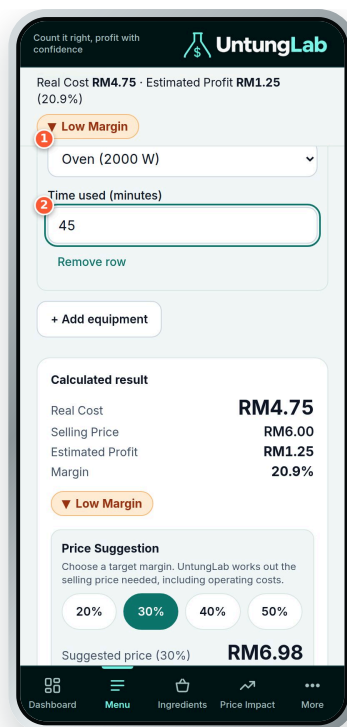

Figure 26. Equipment in a menu item.

- 1 Choose equipment.
- 2 Time used (minutes).

The bar at the top of the screen always shows the **Real Cost**, **Estimated Profit**, margin and status, changing as you fill in.

The menu list and categories

Once any menu has a category, the menu list becomes sections you can open and close, one per category, plus **No category**. If no menu has a category, the list stays flat. Categories also work in the Free version.

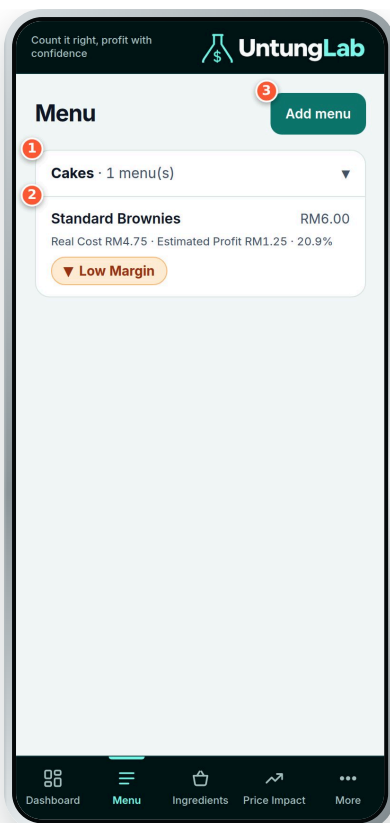

Figure 27. The menu list grouped by category.

- 1 One category: tap to open or close.
- 2 One menu item: price, real cost, profit, margin and status.
- 3 Add menu.

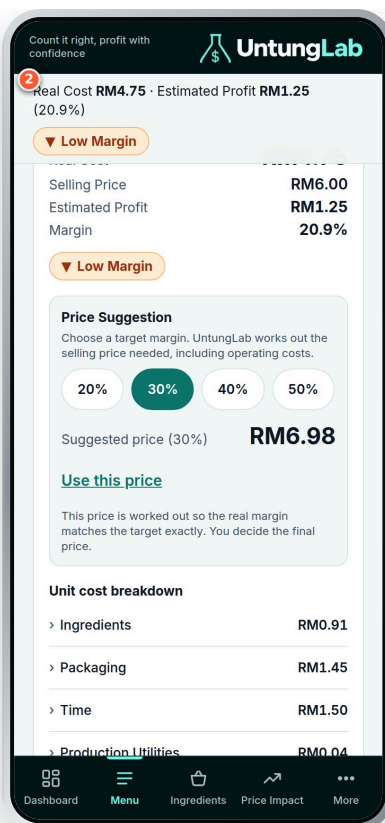

Figure 28. The calculated result.

- 1 Real Cost.
- 2 Estimated Profit.

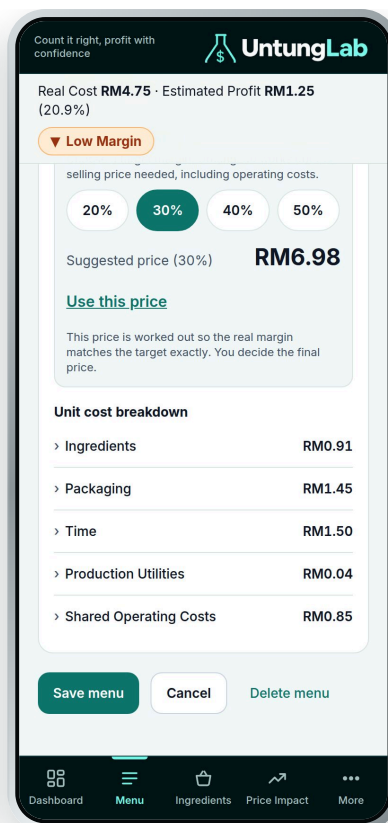

Figure 29. The unit cost breakdown.

The **unit cost breakdown** shows where the cost comes from. Tap a row to see its details and formula. A menu item that is **incomplete** lists what is missing, with a **Go** button straight to where it needs filling in.

REMEMBER

Free version: up to 2 menu items.

Menu variations (Full version)

Have one base recipe with a few versions, such as plain Brownies and Walnut Brownies? Make a **variation** of the base menu item.

- 1 Open the base menu item and tap **Add variation**.
- 2 Give it its own **Menu name** and **Selling Price**. The yield, time and all base ingredients and packaging are shown read-only.
- 3 Add only the **extra ingredients or packaging** (for example walnuts), then **Save menu**.

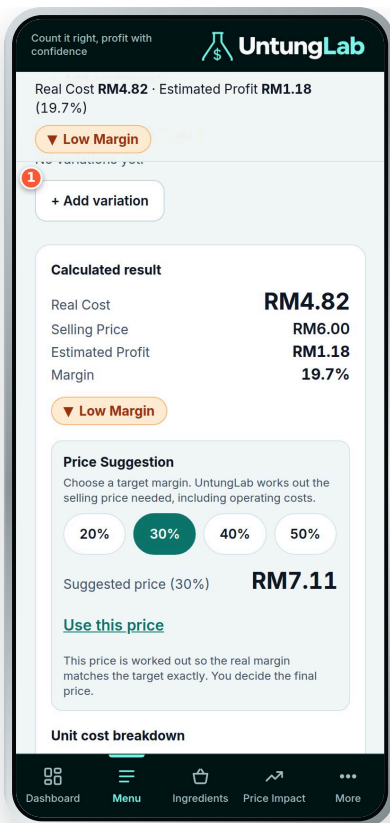

Figure 30. The Add variation button on the base menu.

- 1 Add variation.

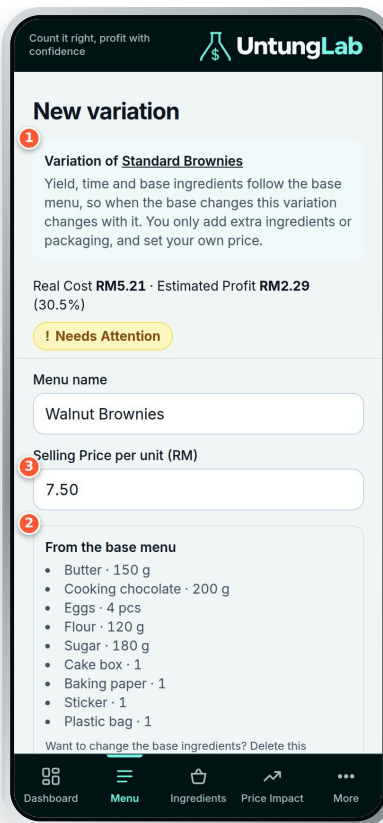

Figure 31. The variation form.

- 1 A variation of the base menu.
- 2 Base ingredients and packaging, read-only.
- 3 The variation's own Selling Price.

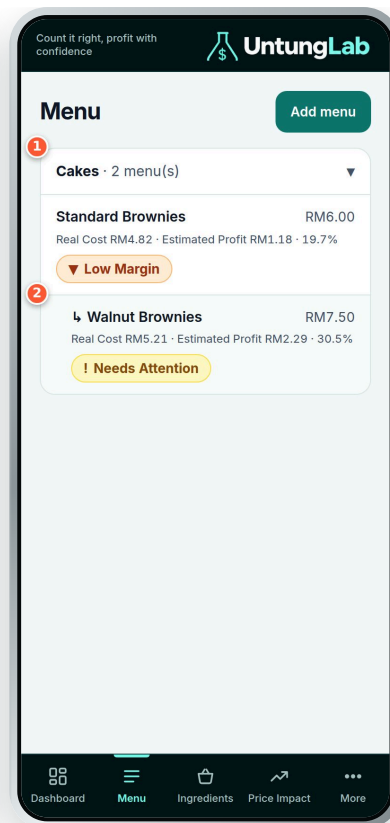

Figure 32. The variation in the list, under its base menu.

- 1 The base menu's category.
- 2 The variation, marked with ↵.

- A variation **follows the base menu live**: when the base recipe changes (or an ingredient price changes), the variation changes too.
- A variation has its own profit, margin and status. It counts as one menu item.
- To change the base ingredients, edit the base menu, or delete the variation and create a new menu. A variation cannot add equipment and cannot have variations of its own.
- If the base menu is deleted, its variations are **not deleted**. Each takes a copy of the base ingredients and recipe and becomes an ordinary menu item.

Price Suggestion

Choose a target margin (20%, 30%, 40% or 50%). UntungLab works out the selling price needed, **including operating costs**. Tap **Use this price** to put that price in the Selling Price field, then tap **Save menu**.

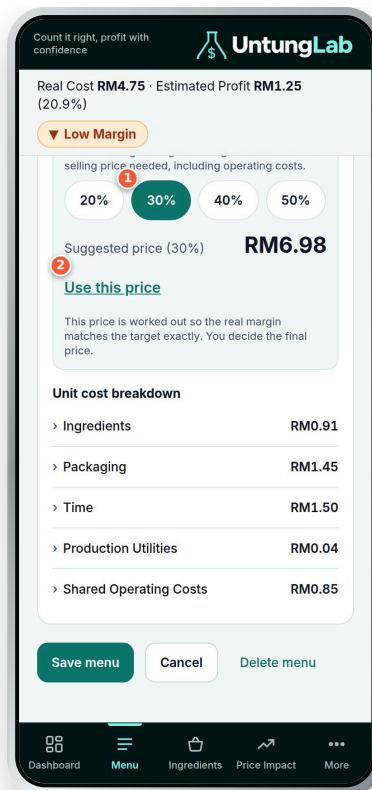

Figure 33. The Price Suggestion.

- 1 Choose the target margin.
- 2 Use this price.

If the target margin cannot be reached because operating costs already take too much of the price, UntungLab tells you. Try a lower margin, or check Operating Costs.

TIP

The suggested price is worked out so the real margin matches the target exactly. You decide the final price; round it to a price that suits your customers.

- **Average margin of all menus:** a plain average over the menus that are complete. Incomplete menus are left out.
- **Profit, Loss, Incomplete:** the number of menu items in each group.
- **Needs attention:** menus losing money, incomplete menus, and ingredient price changes that affect your menu.
- **Margin ranking:** menu items sorted from the highest margin to the lowest, with bars coloured by status.

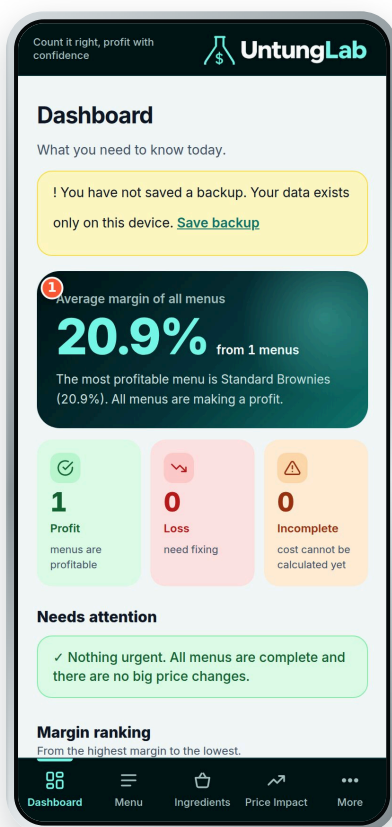

Figure 34. The Dashboard.

1 Average margin of all menus.

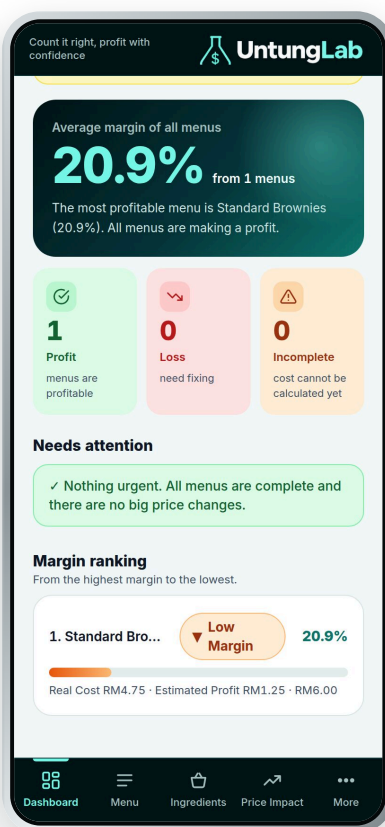

Figure 35. The count cards and the margin ranking.

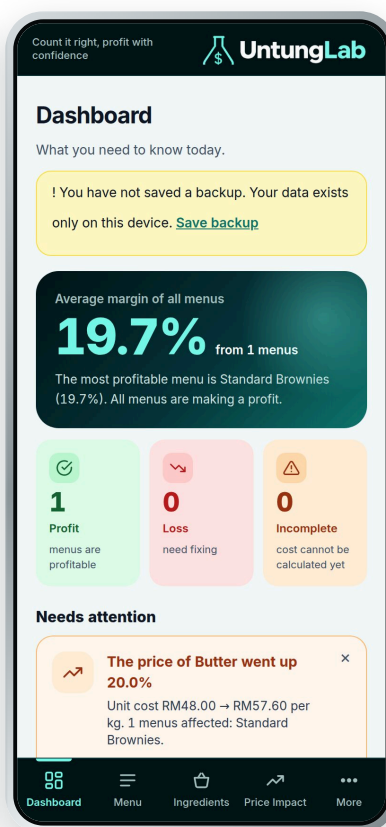

Figure 36. Price change warnings after the butter price was raised.

Each warning can be dismissed with ✕. Tap **View menu** or **View price impact** on a warning to go straight to the details. If you have not saved a Backup, the Dashboard reminds you too.

Price Impact

Try raising or lowering the price of one ingredient and see the effect on every menu item's profit, before you change anything.

- 1 Open **Price Impact** and choose an **ingredient**.
- 2 Pick a chip **+5%**, **+10%**, **+20%** or **+30%**, or tap **Other** and enter a percentage (use – if the price goes down) or a new pack price.
- 3 See the **Effect on cost**: every affected menu item, its cost and profit before and after, and whether its status changes.
- 4 Want to use that price? Tap **Use this price** and confirm. If not, tap **Reset**.

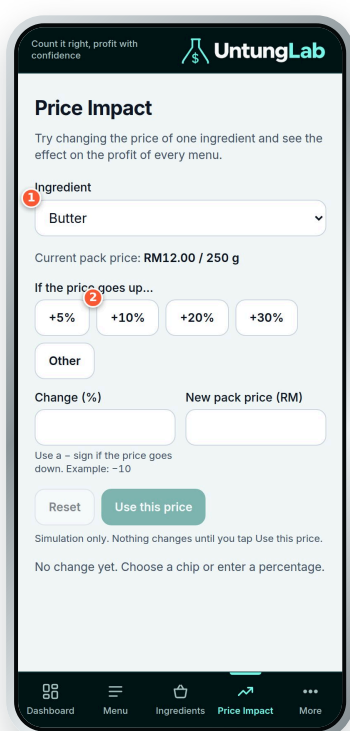

Figure 37. Choose an ingredient and a percentage chip.

- 1 Choose the ingredient.
- 2 Choose the percentage increase.

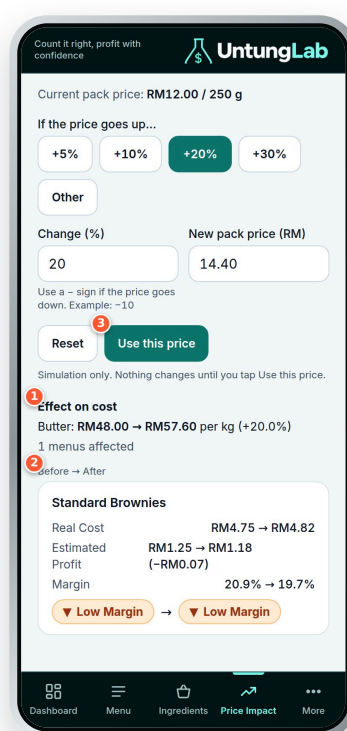

Figure 38. The simulation result.

- 1 Effect on ingredient cost.
- 2 Each menu item: before and after.
- 3 Use this price.

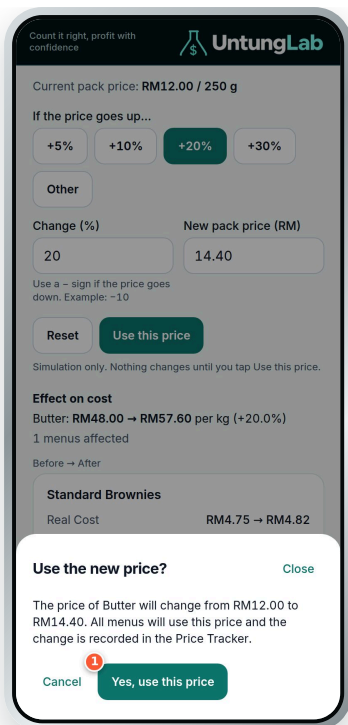

Figure 39. Confirmation before the price changes.

1 Yes, use this price.

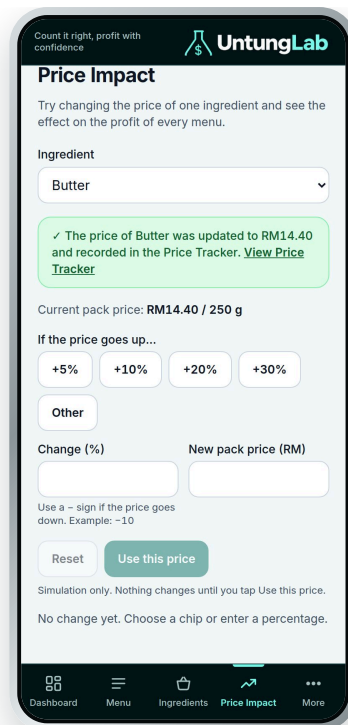

Figure 40. The price is updated and recorded in the Price Tracker.

REMEMBER

It is a **simulation only**. Nothing changes until you tap **Use this price** and confirm. After that every menu item uses the new price and the change is recorded in the Price Tracker.

Price Tracker

A record of every change to purchase price and pack size, compared on unit cost.

Every time you change an ingredient's price or pack size, UntungLab records it. Comparisons are made on **unit cost**, not just pack price, so changing the pack size is not misleading. If the unit differs from the previous record, UntungLab tells you it cannot be compared.

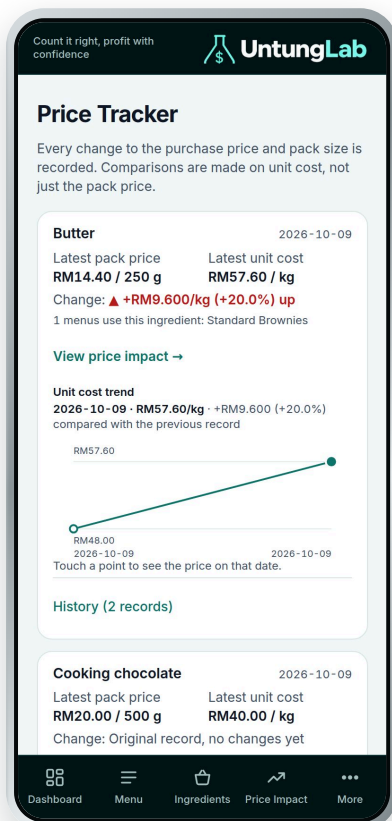

Figure 41. Ingredients with their latest change.

1 Pack price, unit cost and change.

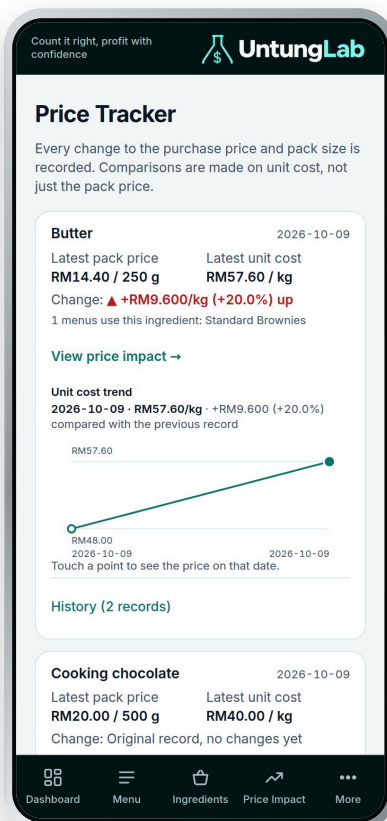

Figure 42. The change, affected menus and trend.

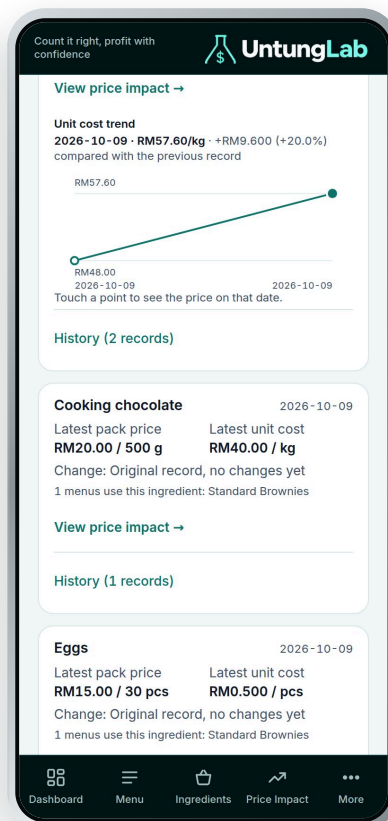

Figure 43. The unit cost trend chart and the record history.

- **Menus affected:** how many menu items use the ingredient. Tap **View price impact** for a simulation.
- **Unit cost trend:** a chart of unit cost from the first record to the latest. Touch a point to see the price on that date.
- **History:** the list of that ingredient's price records. Each change can be checked against your menu through **See the effect on menus** (read-only, worked out with your menu as it is now).

Report

A summary of the cost and profit of every menu item, which you can export to Excel or Google Sheets.

The report shows every menu item with its selling price, real cost, estimated profit, margin and status. All figures match the Menu and Dashboard screens.

- 1 Open **Report** (under **More** on a phone).
- 2 Tap **Export CSV**. The CSV file is saved and opens in Excel or Google Sheets.

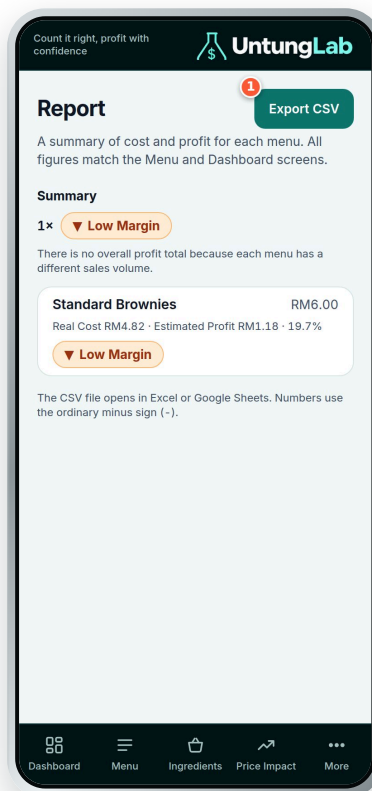

Figure 44. The menu report.

- 1 Export CSV.

REMEMBER

There is no overall profit total because UntungLab does not store how many of each menu item you sell. The figures in the report are profit per unit, not a monthly total.

Backup

Protect your data. It exists only on your device, so a Backup is the only other copy.

If your phone breaks, is lost or is replaced, data without a Backup cannot be recovered. Save a Backup regularly, especially after adding many ingredients or menu items.

Save a Backup

- 1 Open **Backup** and tap **Save backup**.
- 2 Keep the file somewhere safe: the Files app, Google Drive, or send it to yourself by email or WhatsApp.

One file holds all your ingredients, menu items (including categories and variations), costs, workers and price history. UntungLab shows the date of your last Backup and reminds you when it is getting old.

Restore from a Backup

- 1 Open **Backup** and tap **Choose backup file**.
- 2 UntungLab checks the file first and shows a summary. **Nothing changes** until you confirm.
- 3 Recommended: tap **Save the current backup first**, then **Replace data on this device**.

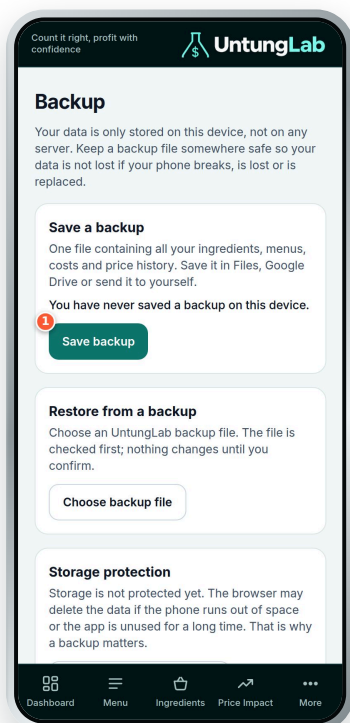

Figure 45. The Backup screen.

- 1 Save backup.

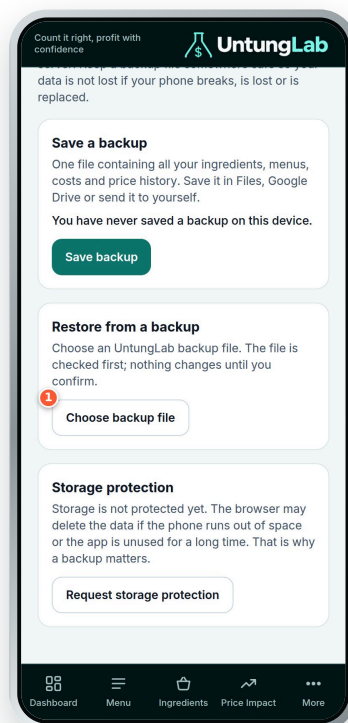

Figure 46. Restoring from a file.

- 1 Choose backup file.

WARNING

Restoring a Backup **replaces all data** on that device. It cannot be undone unless you have a current Backup.

Storage protection

A browser can delete data if the phone runs out of space. Tap **Request storage protection** on the Backup screen. If your browser does not support it, save Backups more often.

REMEMBER

The licence and device ID are **not** part of a Backup. On a new phone you enter your licence code again after restoring your data. The language choice is not included either; choose it again in Settings.

Settings, language and manual

Change the app language and open this manual any time.

Language

The first time you open the app it asks which language you want: **Bahasa Melayu** or **English**. You can change it any time under **More > Settings**. Every screen, message and the manual follow the chosen language. Technical terms such as Backup stay in English in the Bahasa Melayu version.

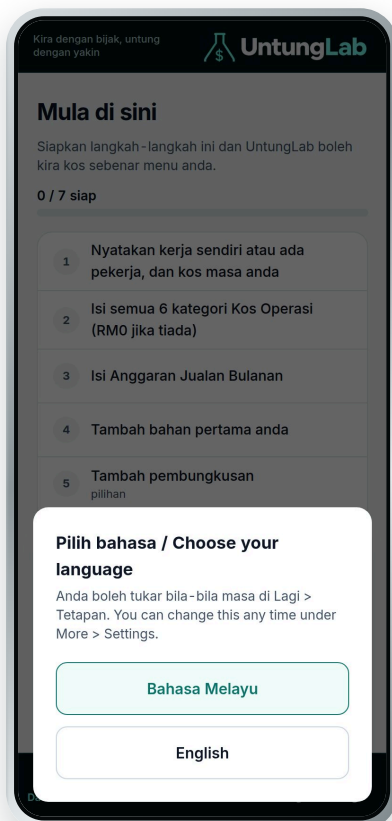

Figure 47. The language choice on first open.

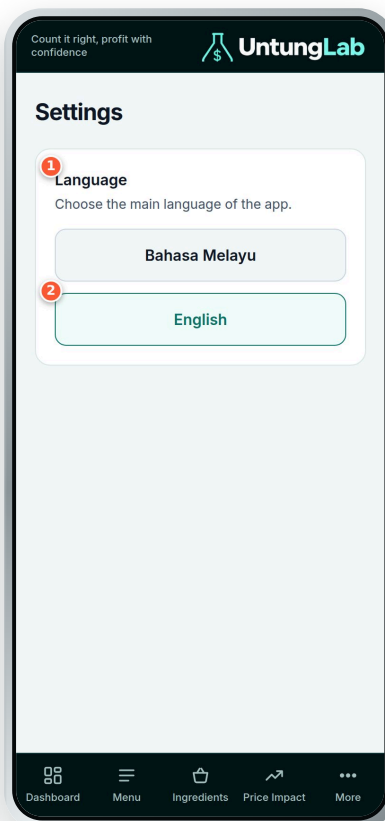

Figure 48. Settings.

- 1 The Language section.
- 2 Choose Bahasa Melayu or English.

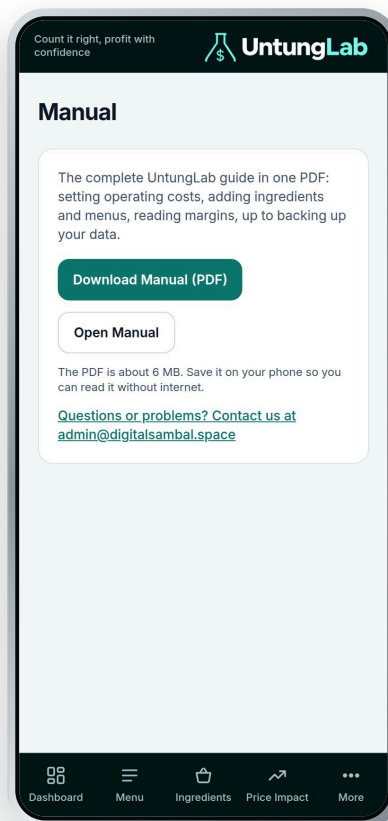

Figure 49. The Manual screen in the app.

Manual

Open **More > Manual** to open this PDF manual. It is in Bahasa Melayu or English to match your app language. It can be opened without internet once the app is installed.

REMEMBER

The licence code email and the payment screen are always in Bahasa Melayu.

Licence and changing phones

One licence code can be used on two devices.

- The licence code looks like **UL-XXXX-XXXX-XXXX**. Keep the email that contains it.
- One code works on **2 devices**, for example your phone and your tablet.
- Activation needs internet **once**. After that UntungLab works without internet.
- The Licence screen shows the last four characters of your code for reference.

Changing phones

- 1 On the old phone: save a **Backup** (see the Backup chapter) and send the file to yourself.
- 2 On the old phone: open **Licence** and tap **Release this device**. This frees up one place. Needs internet.
- 3 On the new phone: install UntungLab, **restore the Backup**, then open **Licence** and enter the same code.

TIP

Lost the old phone before you could release it? Contact the seller through your purchase email. Do not wait until the code is full.

Messages you may see

Message	What to do
This code was not found	Check the spelling. Upper or lower case and dashes do not matter. A code never contains the letters O, I, L, U or the digits 0 and 1, so if you read one of those, look again.
This code is already used on 2 devices	Open Licence on the old device and tap Release, or contact the seller.
No internet connection	Connect to the internet and try again. Only activation and releasing a device need internet.
Too many attempts	Wait an hour and try again.
This code has been cancelled	Contact the seller.

Frequently asked questions

My menu item says "Incomplete". Why?

Some information is missing. Open the menu item and look at the **Needs completing** list. Usually: Estimated Monthly Sales, Time Value (or the workers list), or one of the 6 Operating Cost categories is not filled in, or the electricity rate is not saved when the menu uses equipment.

Why is my margin low when the profit looks big?

Because UntungLab counts every cost, including your time and operating costs. An old estimate that only takes off the ingredient cost will always be higher.

Do I need to include my own pay?

That is what **Time Value** is for. You set what an hour of your time is worth, and UntungLab includes it in the cost of every menu item. If you have workers, choose **I have workers** and enter their pay (and your own if you wish).

The oven's electricity is not counted. Why?

Electricity in Operating Costs must be filled in with **Calculate from bill** and the **electricity rate** must be saved. If Electricity is a Direct amount, the full bill is already counted and equipment is not added again.

A menu item is losing money after I changed an ingredient price. What now?

Open the menu item, pick a target margin in **Price Suggestion** and see the price you need. You can also try another ingredient or use less.

Can I use it on two phones?

Yes, up to 2 devices. Each device has its own data, so move data with a Backup.

My data disappeared after a reload or changing browser?

Data is stored in the browser you use. Open UntungLab from the same icon and the same browser. Installing UntungLab from a different address gives a different, empty set of data. Restore from a Backup if you have one.

What about refunds?

Within 7 days of purchase, reply to your licence code email.

Common problems

Problem	Fix
The app cannot be installed or there is no Install button	Use Safari (iPhone) or Chrome (Android). Make sure the address starts with https:// . Try closing and reopening the page.

An "unsafe app" warning when installing on Android	Tap More details , then Install anyway .
The data on the device cannot be opened	Close other tabs that have UntungLab open, then reload.
The new version does not show	Close the app completely and reopen it while online. The new version downloads in the background.
Equipment electricity is not counted in menus	Make sure Electricity in Operating Costs is filled in with Calculate from bill and the electricity rate is saved.
Cannot add an ingredient, menu item, packaging or other cost	The Free version has limits (10 ingredients, 2 menu items, 2 packaging items, 3 other costs). Activate your licence code to lift them.
The Excel import shows problem rows	Read the reason on each row (for example an invalid price or a unit not in the list), fix the file and choose it again. The good rows can still be imported.
The licence code email did not arrive	Check Spam, Promotions and Important. The code is also shown on screen after payment.

Glossary and worked example

The terms used in the app, and one menu item worked out step by step.

Glossary

Real Cost	The total of every cost of one unit sold: ingredients, packaging, time, production utilities and shared operating costs.
Selling Price	The price you sell one unit for.
Estimated Profit	Selling Price minus Real Cost.
Margin	Estimated Profit divided by Selling Price, as a percentage.
Time Value	What an hour of your working time is worth (RM per hour). Replaced by the team hourly rate if you have workers.
Team hourly rate	The total pay of all workers divided by their total working hours in a month.
Production Utilities	The electricity cost of equipment in a menu item.
Shared Operating Costs	The share of business costs (rent, water and so on) carried by one unit sold.
Operating Cost Rate	Total monthly operating costs divided by Estimated Monthly Sales.
Batch	One cook or one preparation, which produces several units to sell.
Unit cost	Purchase price divided by the quantity in the pack.
Pack mapping	A description of how many units of use are in one pack, for example 1 pack = 12 pieces.
Variation	A menu item made from a base menu item that follows it live, with its own extra ingredients and price.
Archive	Hide an item you no longer use without deleting it.

Example: Standard Brownies

The figures below match the screens in this manual. One batch makes 20 pieces, takes 120 minutes, and sells at RM6.00 each. Time Value RM15 an hour, monthly operating costs RM340.00 and monthly sales RM2,400 (a 14.2% rate), electricity rate RM0.50 per kilowatt hour.

Part	Working	Per unit
------	---------	----------

Ingredients	$(150 \text{ g butter} \times \text{RM}0.048) + (200 \text{ g chocolate} \times \text{RM}0.040) + (4 \text{ eggs} \times \text{RM}0.50) + (120 \text{ g flour} \times \text{RM}0.004) + (180 \text{ g sugar} \times \text{RM}0.003) = \text{RM}18.22$ per batch, $\div 20$	RM0.91
Packaging	Box RM1.00 + baking paper RM0.15 + sticker RM0.10 + bag RM0.20	RM1.45
Time	$120 \text{ minutes} \div 20 = 6 \text{ minutes}; 6 \div 60 \times \text{RM}15$	RM1.50
Production utilities	Oven $2,000 \text{ W} \times 0.75 \text{ hour} \times \text{RM}0.50 = \text{RM}0.75$ per batch, $\div 20$	RM0.04
Shared operating costs	$14.2\% \times \text{RM}6.00$ (selling price)	RM0.85
Real Cost		RM4.75
Estimated Profit (RM6.00 – RM4.75)		RM1.25
Margin (RM1.25 $\div$ RM6.00)		20.9%

Price suggestion at 30%: the direct cost (without operating costs) is $\text{RM}0.91 + \text{RM}1.45 + \text{RM}1.50 + \text{RM}0.04 = \text{RM}3.90$. Price needed = $\text{RM}3.90 \div (1 - 0.30 - 0.142) = \textbf{RM6.98}$. At that price the operating cost also rises because it follows the selling price, and the real margin is exactly 30%.

Thank you for using UntungLab. Count it right, profit with confidence.
